PHP & MySQL Task Management System

Objective: Create a simple web-based task manager using PHP and MySQL that allows users to register, log in, and manage their personal tasks.

📋 **Instructions (25 marks):**

1. **Database Setup**
   - Create a MySQL database named `task_db`.
   - Create two tables:
     - `users` (id, username, password)
     - `tasks` (id, user_id, task_title, task_description, created_at)
2. **User Registration (Create Operation)**
   - HTML form to register with `username` and `password`.
   - PHP code to insert users into the `users` table.
3. **User Login & Session Management**
   - HTML login form.
   - PHP code to verify credentials and start a session.
4. **Task Management**
   - Allow logged-in users to:
     - Add new tasks
     - View their tasks
     - Delete Task
